

Safe Citizen App & Smart Watch

The Safe Citizen App utilizes cutting edge technologies such as smart sensors and artificial intelligence to keep you safe and secure anywhere you choose to go. If you've ever found yourself in a situation like Lauren S. who was a 21 year old at the time and walking down Ballard Street in 2017. A suspicious man asked her where her boyfriend was, she then proceeded to ignore him and continued on her way. He proceeded to follow her every turn down the zig-zagging streets on the way to her moms house. After 4 the fourth consecutive turn she inconspicuously used one of Safe Citizen's Smart Watch™ programmable voice commands, "Call Alice". After receiving her Safe Citizen's Smart Watch™ she set the device up and it prompted her to enter her safe words and designate a response to be sent to police for each one. Upon speaking the words "Call Alice" The Safe Citizen App in combination with the Smart Watch went to work in the background. It automatically notified local police of her current location, heart/respiratory rate, Oxygen levels, Alcohol Levels, Gas/Smoke Levels, GPS Coordinates, and a live Audio/Video feed of exactly what Lauren was seeing and hearing. **It notified the local authorities that she had selected a Level 2 Alert** which indicates no crime has been committed but she was feeling extremely unsafe. Within less than a second, Police were contacted along with other Safe Citizen App users in the immediate area. The Cafe she walked past had another user with the app on their phone, they walked out and called out for "Alice" and she immediately walked up to her and walked her inside to safety. **Within 3 minutes the local police had arrived** and they were able to question the man who was stalking her. It turns out he was a wanted felon for other various crimes. This is just one of the many stories that can be shared of how the Safe Citizen App in combination with the Smart Watch can help you avoid unsavory situations.

If you're a **victim of an unpronounced attack** or have a second to react, you can double tap the face of the watch to notify authorities of a Level 3 Alert which sends them your vital signs for monitoring and requests immediate emergency services to be dispatched to your location. Dispatchers will be alerted of things such as elevated heart rate and an appropriate response such as an ambulance will be automatically dispatched to the user's location for immediate assistance. In case the user doesn't have time to interact with the Smart watch, the array of smart sensors on the Smart Watch can utilize our proprietary Artificial Intelligence algorithms to determine if someone is in danger and can automatically alert the appropriate authorities within 1 second or less. A combination of sensor data such as heart rate, respiratory rate, blood oxygen levels, G-forces, and audible pleas and screams for help will all be forwarded immediately to authorities. Upon any Alert Level 1-3 being triggered, an automatic phone call to 911 is launched on your phone or Smart Watch

Our mission is to serve you with a quality, cost effective product and service. We operate on a pay as you go model. If you only take a run once a week, or head out to the bars on the weekend your only paying for our monitoring services when you need it the most. We offer to you our smart watch at the cost we pay to have it manufactured to make it more appealing to the everyday user at a low price of \$129.99. Similar Smart Watches such as the Apple Watch start at \$399.99. Our Smart Watch offers all the same functionality to the competition in addition to additional monitoring sensors increasing the efficacy of the Smart Citizen App and Smart Watch System. While our App can operate as a standalone App on your phone, or a downloadable app to your existing Apple or Samsung Galaxy Smart Watch - Having our integrated systems Smart Watch will give you a slight edge in time reduction to call for emergency services and in-case you needed medical services as well the responding Healthcare professionals can have a more indepth report of exactly what your body is doing and have a better understanding of what type of help you will need upon their arrival.

Alert Level 1 - Someone nearby needs Medical/Police Assistance

Alert Level 2 - I'm feeling unsafe/scared at the moment

Alert Level 3 - I'm about to be attacked or I'm currently under attack

The 12 Sensor Types on the Safe Citizen's Smart Watch™

- GPS Sensor
- Camera/Microphone/Speaker
- Heart Rate Monitor Sensor
- Blood Oxygen Levels Sensor
- Respiratory Rate Sensor
- G-force Motion Sensor
- Light Sensor
- Proximity Sensor
- Body Temperature Sensor
- Humidity % Sensor
- Smoke/Gas Sensor
- Alcohol Sensor

Apple Watch and Samsung Galaxy Watch are Limited in functionality to just 3 sensors

- GPS Sensor
- Heart Rate Monitor Sensor
- G-force Motion Sensor

**Multiple Trigger Words “Help! Help! Help!”, “Hey Safe Citezen” “Call Alice”
Double or Tripple Tap the face of the Safe Citizen's Smart Watch™ to trigger a Level 3
Alert**
